

A Semi-Implicit, Three-Dimensional Model for Estuarine Circulation: Usgs Open-File Report 2006-1004 (Paperback)

Filesize: 8 MB

Reviews

Definitely among the finest publication I have got possibly read. It is really simplified but shocks from the 50 % of your pdf. Your life span will be convert as soon as you total looking over this book.

A SEMI-IMPLICIT, THREE-DIMENSIONAL MODEL FOR ESTUARINE CIRCULATION: USGS OPEN-FILE REPORT 2006-1004 (PAPERBACK)

To read **A Semi-Implicit, Three-Dimensional Model for Estuarine Circulation: Usgs Open-File Report 2006-1004 (Paperback)** eBook, please refer to the web link below and download the document or have accessibility to other information that are highly relevant to A SEMI-IMPLICIT, THREE-DIMENSIONAL MODEL FOR ESTUARINE CIRCULATION: USGS OPEN-FILE REPORT 2006-1004 (PAPERBACK) book.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.A semi-implicit, finite-difference method for the numerical solution of the three-dimensional equations for circulation in estuaries is presented and tested. The method uses a three-time-level, leapfrog-trapezoidal scheme that is essentially second-order accurate in the spatial and temporal numerical approximations. The three-time-level scheme is shown to be preferred over a two-time-level scheme, especially for problems with strong nonlinearities. The stability of the semi-implicit scheme is free from any time-step limitation related to the terms describing vertical diffusion and the propagation of the surface gravity waves. The scheme does not rely on any form of vertical/horizontal mode-splitting to treat the vertical diffusion implicitly. At each time step, the numerical method uses a double-sweep method to transform a large number of small tridiagonal equation systems and then uses the preconditioned conjugate-gradient method to solve a single, large, five-diagonal equation system for the water surface elevation. The governing equations for the multi-level scheme are prepared in a conservative form by integrating them over the height of each horizontal layer. The layer-integrated volumetric transports replace velocities as the dependent variables so that the depth-integrated continuity equation that is used in the solution for the water surface elevation is linear. Volumetric transports are computed explicitly from the momentum equations. The resulting method is mass conservative, efficient, and numerically accurate.
