## ASTRONOMY AND ASTRO-PHYSICS VOLUME 11

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 398 pages. Dimensions: 9.7in. x 7.4in. x 0.8in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1892 Excerpt: . . . the part situated on the side towards the east limb (considered geocentrically) was smaller than the other. I again followed the polar spot from 9 12 to 10 1 28 the same day, and the little satellite spots motion of rotation around the pole was very sensible, as my drawings show. At moments the black thread took the aspect of a black point isolated in the midst of polar snows. At 9h 43m the center of the satellite polar spot reached the central meridian; we find in this manner an approximate longitude of 204. 3 for its center. At 10h 28m its eastern extremity (seen from the earth) was near the central meridian which gives it the longitude of 215. 3. to Be Continued. Physical Nature of Shooting Stars and Aerolites. 481 THE PHYSICAL NATURE OF SHOOTING STARS AND AEROLITES. W. F. DEXNING, England. D. I. M. TtJbar, in a paper on Shooting Stars, Bolides and Aerolites, presented to the Astronomical Society of the Pacific ( Publications, Vol. III, No. 19), advances the following theory in explanation of them: Shooting Stars are ball-lightnings which abound in the upper regions of the atmosphere and under certain conditions their number over one and the same region is so considerable as to present the appearance of a shower. When these lightnings are formed in the lower regions of the atmosphere or, in the case of their descending far down in the same, they originate the so-called bolides, and when the...
